Geographic Information Council

GIS Activity Update
- Tim De Troye

Talking Points / Marketing

- Sourced need from Strategic Plan
- Developed set of talking points, marketing plan, and case study to illustrate importance of GIS data and data sharing to decision makers
- Recently completed and will be distributed
- Utilized remaining funds from CAP grant in order to get assistance in developing document

Street Centerlines

- SC DOT – developing functional specifications document for application to bring state/local roads together
- Initial test case was Lexington County
- Focused on willing / voluntary participation of counties
- Will ultimately result in a more complete data set with both DOT and county based information

Street Centerlines

- E911 ORS Group
- Acquiring regular updates from most counties now
- Greatly increased rate of updates
- Several counties severely out of date have been updated (relationships)
- Streamlined process of getting updated data
 - working with E911 and coordinator
- Examining web-based means of distribution

S.C. Road Centerline Update Status

update_status_by_county

- Within 3 months
- 3 - 6 months
- 6-9 months
- 2008
- 2007

as of 11-18-2009

Address Points

- Address points from most counties that have them have been incorporated
- Some municipalities maintain their own address points – incorporated where possible
- Some organizations require a data agreement

Parcels

- Strategic plan indicated importance of parcels
- Currently pursuing access to parcels
- Very sensitive subject for most counties
- Data is viewed as extremely valuable asset by the counties
- Currently have eight counties, two more sending data, project still in process

Parcels – Next Steps

- Continue to request data, contacting counties, etc.
- Determine need for one parcels layer (statewide) versus access to data on county by county basis
- If one layer is needed, identify state level data steward to work on maintenance

Parcels Status

- Complete
- Waiting
- OK wAgreement
- Checking
- Data Building
- Message
- Called - no message
- No Parcels
- Unknown

Last revised 11/10/09

Image Server Status

- Initial server tests results – slow
- Loaded new server software – initial testing phases
- New software – better server/data management capabilities
- Test area being loaded (Columbia)
- Focus – bandwidth usage / speed

Data Agreement

- Several local government organizations require data agreements to access their data
- Every agreement is different, each agency signs
- Goal: to develop an agreement that can work for state and local government data sharing and participation
- Concern: South Carolina Open Records Laws

Geographic Information Council

Open Records Laws
